HIGH PRESSURE LAMINATE FLOORING • WALL PANELS • ACOUSTIC PANELS
POSTFORMING COMPACT GRADE

PL PRODUCT RANGE

PARQCOLOR®

PARQCOLOR® is a comprehensive range of commercial grade flooring available in a large number of patterns, styles and textures. It is a composite product which consists of a high density wood-fibre core (with a very high humidity resistance) with a sheet of Print® HPL laminate bonded to the surface and counterbalanced with Print® HPL laminate of identical thickness.

PARQCOLOR® is particularly suited for heavy duty applications such as shops, offices, hotels, airports and public sector environments such as hospitals, libraries and schools. It offers the twin benefits of high performance and durability combined with an extremely attractive appearance.

The flooring can be laid over existing floors to minimise disruption. It has excellent impact resistance as well as high resistance to scuffs, spillages, oil, dirt and staining. It is quick and easy to install with tongued and grooved joints and does not require expensive preparation work. The finished floor is maintenance free, does not need polishing, sanding or varnishing and is easily cleaned with a damp mop.

The UK range includes several collections including:

CHROMATIC – A range of solid colours from light to dark, capable of evoking the magic of a green lawn, the soft hills of Siena or a natural and pure landscape.

EXPOFLOOR – While maintaining the features of a high-pressure laminate of excellent quality, Expofloor is the only product in the **PARQCOLOR®** collection classified as AC3. It is particularly suitable for exhibition stands, commercial spaces with light traffic and residential schemes.

FIBER – A high-pressure laminate whose surface contains small fibres obtained from recycled burlap coffee bags. The random patterns of the fibres create a textured and aesthetic visual appeal.

GOLD – The largest collection of decors incorporating woods, coloured woods and special effects such as iron, aluminium and stone. For use in particularly high traffic areas where extraordinary resistance is required, such as shops, offices, hotels and airports, and for public sector environments such as hospitals, libraries and schools.

GOLD MICROLINE – Featuring the same manufacturing composition as the Gold Collection, but with the addition of an innovative Microline surface finish which gives the wood decors a special three-dimensional effect.

PARQWOOD – The surface layer includes a real wood veneer treated with highly resistant resins that do not alter the look or the feel of the wood. This provides all the visual and aesthetic appeal of a natural wood floor with the intrinsic strength and durability of a high pressure laminate.

ULTRA – The ultra resistant flooring designed for the heaviest use and for continuous traffic. It features an even greater resistance to abrasion thanks to a special protective overlay.

VINTAGE – A new range of flooring for high traffic areas which consists of high pressure laminate maxiplanks to simulate the wood floors as found in traditional and heritage buildings.

PL PRODUCT RANGE

PARQWALL®

A versatile range of wall panelling products which is available in High Pressure Laminate bonded boards with a choice of fixing profiles. They can be used for both aesthetic and acoustic installations. The modular **Parqwall** system is easy to install, and is suitable for cladding walls of any type and any condition, offering a fast and effective refurbishment solution. Depending on the backing system used, Parqwall allows space behind the panels to run essential services and can also be used to level uneven walls.

It is available with both visible anodised aluminium joints and fold-away joints, which allow the cladding material to display a completely unbroken surface. Special joints have also been produced which allow both horizontal and vertical fixing of racks.

To complement the impressive standard **Parqwall** range, the following option is available which offers the same modular system and jointing techniques:

SILENTWALL® – An acoustic option which is designed to absorb noises from high-traffic rooms and in those with an increased and sustained level of background noise.

COESO®

COESO® is a self-supporting postformed high-pressure-laminate panel (Print HPL) which can be made according to customer specific requirements. The bending technologies and the characteristics of the compact laminate allow the production of particularly unlimited shapes and products. It can be customised by CNC drilling and cutting, before the panel bending is carried out. The manufacturing process for the postforming of **Coeso** does not change the laminate's physical-chemical structure or its surface features.

COESO® is available in both interior and exterior grade:

COESO® - In its standard form for this, **Coeso** is a very versatile product, resistant to wear, water, abrasion, vandalism, scratches, impacts, cigarettes burns, and micro-organisms. It is suitable for a variety of applications including shelving, fixtures and counter tops.

COESO MEG®, developed for outside applications, is resistant to sunlight, frost, dampness and acid rain. The characteristics of versatility, beauty, stability and compactness make **Coeso Meg** a material suitable for various types of external applications with appealing visual impact, available in a wide range of ABET LAMINATI decors or customised panels using the Digital Print technique.

ABOUT PL and ABET LAMINATI:

PL forms part of the **ABET LAMINATI** Group and manufactures products using **ABET's** high pressure laminates. The products include the extensive **PARQCOLOR®** high pressure laminate flooring range, **PARQWALL®** wall cladding system, **SILENTWALL®** acoustic wall cladding system and **COESO®** postformed compact grade laminate.

PL is a world leader in the design and manufacture of high pressure laminate and has invested heavily in state-of-the art machinery and custom-designed equipment. It is based 30km north of Milan in an 18,000 square metre factory.

ABET LAMINATI manufactures the world's most innovative laminates created by the best Italian and international designers.

ABET LTD was established in 1981 and is the UK & Ireland branch of **ABET LAMINATI**. The company has an extensive warehouse and offices in London's Docklands.

ABET LAMINATI is one of the world's leading manufacturers of decorative laminate. From 1957, the company has grown rapidly. The prestigious awards obtained in recent years like the "Compasso d'Oro" in 1987, the European Design Award in 1990 and the "Compasso d'Oro alla Carriera" in 2001, attest to the goals reached by the company whose commercial network is now very broad: 7 subsidiaries operate in Italy, together with 13 commercial companies and agencies in over 90 countries.

The output from the two factories exceeds 220,000 sq metres per day, making Abet Europe's largest manufacturer of high pressure laminates.

ABET LAMINATI has always focused strongly on creativity and innovation in laminate manufacture. It is this design-led approach, coupled to strong links with the best

Italian and International designers, that enables Abet to offer such a diverse range of laminates and such a comprehensive range of colours, styles and textures.

ABET LTD offers a RIBA approved CPD on High Pressure Laminates which covers the history of Abet, how HPL is made, various grades, maintenance and fabrication. More details can be found on our website.

ABET LAMINATI has a strict environmental policy and **ABET Ltd** is certified to EN 14001. A copy of the company's environmental statement can be found on the website.
