OBERFLEX PRODUCT RANGE

Oberflex

Oberflex is a high pressure laminate with a unique difference – it features a real wood veneer finish.

Oberflex is a popular material for architects and designers because it combines the aesthetic beauty of real wood with the performance and durability of high pressure laminate. This means a tough surface which is abrasion, impact and scratch resistant and also resistant to UV light and cigarette burns.

Oberflex is available in over 100 different wood species ranging from dark woods such as Mahogany and Wenge through to lighter Sycamore, Ash and Birch. There are several tints available and the veneer slicing method used in its manufacture gives specifiers the choice of straight-grain or flowered veneer, as well as bookmatched or random-matched finishes. It can be bonded onto most substrates to provide a visually appealing and low maintenance backdrop with long life cycle performance.

The range comprises several collections and included in the UK offering are:

OBERFLEX AND PRESTIGE OBERFLEX –

Comprehensive standard range of pre-finished wood veneer laminates, available in a vast selection of veneer species, with matt, satin, brushed or relief textures and various tint options.

CHIC AND POP – The new Chic & Pop Collection inspired from current trends, combines two radically opposed

styles. The Chic Collection introduces new whitened, grey, natural and chocolate tints applied on walnut and zebrano wood veneers, together with a new Astrakhan finish. A classical, timeless, elegant and chic collection. The Pop Collection reveals the natural structure of the wood under new and unexpected tints. These vibrant fluorescent tints, never seen on natural wood veneers, are offering offbeat and daring answers to modern, coloured and pop ideas.

TEXTURED WOODS – A highly effective collection of nuances of white, black and grey combined with textured veneers. There are various finishes available including a tremendous pearlescent finish. This blend of silky and metal effect adds more than ever an amazing lightness to the gouged, clawed, sea, hammered, gator and sables wood textures.

NATURAL SHADES – In addition to the already impressive selection of Textured Woods, the Natural Shades collection has been produced using a unique process adapted from the gouged, sea-wood and gator patterns and combined with veneer species. The end result is a striking shadow and colour contrast with very natural nuances.

SPICED WOOD – A collection created using various coloured tints on contrasting veneers which are then processed to create a highly attractive striped two-tone effect. The pepper, nutmeg, star anise, cumin, liquorice and sesame finishes are complemented by a brushed texture throughout the range.

OBERFLEX PRODUCT RANGE

Obersound

Obersound are ready-for-use panels consisting of a substrate bonded on one side with an **Oberflex** real wood veneer laminate, and counterbalanced on the other side. The custom-made panels can be supplied entirely machined, either plain or perforated, depending on acoustic and

aesthetic requirements. They are suitable for both wall and ceiling installations and offer a particularly efficient surface treatment which is resistant to scratches, abrasion, UV lights, chemical products and fire.

Obersound 5.5

Oberflex appointed design agency '5.5 Designers' to review the **Obersound** panels and propose a new collection of panels offering an entirely new response to architects and specifiers calling for a range of acoustic panels manufactured from **Oberflex**.

Acoustic products generally have standardised perforations, with the patterns resulting from tools and production constraints. They are often thought out for the sole purpose of optimising costs and performances to the detriment of aesthetic quality.

The development of new production tools in collaboration with 5.5 Designers meant that new and original perforation patterns could be created. Far and above just a catalogue of acoustic performances, they introduced a collection concept as done in the fashion world. These proposals now offer an exciting real potential for architects and specifiers, who are increasingly sensitive to the details of their constructions.

Deck d'Ober

The **Deck d'Ober** Collection is a range of boat deck jointed solid wooden strips. **Deck d'Ober** panels can be used to achieve curved surfaces, such as a bathtub apron, or column wrapping. It is available in four wood species, Teak, Wenge, Bubinga and Doussie, and is generally supplied

unfinished. The strips are joined together on installation with a choice of black or white mastic, according to the aesthetic preference of the specifier. The Teak finish is also suitable for external applications and for use in very humid environments such as swimming pools or shower rooms.

ABOUT OBERFLEX:

The Oberflex Company concentrates its interests and skills into the service of transforming a living material chosen for its environmental qualities: wood.

Laminating wood veneer is at the heart of Oberflex know-how. As an industrial specialist in wood for more than 80 years, Oberflex offers a range of panels with technical high-quality and great aesthetic diversity.

Oberflex is now a solidly placed player in the field of interior decoration. With the strength of its long experience, this company offers the widest range of wood in the world, with more than 500 references, for solutions suited for the various sectors of construction (offices, public buildings, hotels, restaurants, shop fitting, etc) and also for industry (doors, furniture, kitchens, bathrooms etc).

OBERFLEX® KNOW-HOW

The aesthetical qualities of Oberflex panels result from a meticulous selection of the most beautiful species of wood coming from suppliers from all over the world. Oberflex panels fit with all kinds of interior layouts thanks to the surface finishing obtained by the pressing of hot resin onto the veneer. The panels are resistant to abrasion, impacts, scratches, UV lights, cigarette burns and staining. The Oberflex finishing guarantees a high technical quality range of products, which are fire-resistant (type M1), can be cleaned with soapy water and don't require any surface treatment.

THE TRADITION OF INNOVATION

Oberflex makes innovation a daily priority, a determination expressed in permanent investment in research and development. The company thus stands out each year by its ability to modernise and enrich its offer with the twice-yearly launch of new collections.

ENVIRONMENTAL CONSERVATION

For Oberflex, it is essential to integrate environmental questions into its industrial approach. The company deliberately committed itself to a citizen's approach, expressed over several years in a policy that has radically turned to ecology and Research & Development work under the influence of eco-design. For Oberflex, being supplied with components and timber products from durably managed forests – under controlled and monitored exploitation – is a daily commitment expressed in the PEFC certification of its products.

Oberflex products also correspond to targets frequently chosen on the occasion of HEQ (High Environmental Qualities) projects.

Oberflex is exclusively distributed in the UK by Abet Ltd.
